SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT
UNDER 37 C.F.R. § 1.97

Mail Stop: AMENDMENT
Commissioner for Patents
PO Box 1450
Alexandria, Virginia 22313-1450

Sir:

Please find, pursuant to 37 C.F.R. § 1.98(a)(1), the enclosed Form PTO-1449 which contains a list of all patents, publications, or other items that have come to the attention of one or more of the individuals designated in 37 C.F.R. § 1.56(c). While no representation is made that these references may be "prior art" within the meaning of that term under 35 U.S.C. §§ 102 or 103, the enclosed listed references are disclosed so as to fully comply with the duty of disclosure set forth in 37 C.F.R. § 1.56.

Moreover, while no representation is made that a specific search of office files or patent office records has been conducted or that no better art exists, the undersigned attorney of record believes that the enclosed art is the closest to the claimed invention (taken in its entirety) of which the undersigned is presently aware, and no art which is closer to the claimed invention (taken in its entirety) has been knowingly withheld.

Statement of Relevance of References Listed
Unaccompanied by English Translation
Under 37 C.F.R. § 1.98(a)(3)

In accordance with 37 C.F.R. § 1.98(a)(3), the following concise explanation of the relevance of each listed reference that is not in the English language and unaccompanied by a translation into English is provided:

Japanese Patent No. JP60153184, Issued 8/12/1985: Light Receiving Element --

PURPOSE: To obtain the titled element having a small interterminal static capacitance and unnecessitating high accuracies in the positioning of a light receiving element chip to the lens center by a method wherein a substrate is thinned and a condenser lens is made integral with the substrate, and an insulator package is used for the light receiving element chip.

CONSTITUTION: The substrate 30 of the illustrated light receiving element is made of insulating glass which is optically transparent in a light receiving wavelength band and chemically stable. A photoelement chip 32 is fixed to the lower surface of this substrate 30, and bonding pads 34 and 36 are formed. The pad 34 has a circular part 34A, and a photo receiving window 38 is formed at the center of this part 34A. The electrode around the photo receiving window of the chip 32 is diebonded to the circular part 34A of the pad 34 so that the photo receiving plane of the chip 32 may be coincident with the window 38. On the other hand, the electrode on the opposite side of the photo receiving plane of the chip 32 is connected to the pad 36 with a wire 40, and outer leads 42 and 44 are connected to the pads 34 and 36, respectively. The condenser lens 46 is integrally formed to the upper surface of the substrate 30 in agreement with the window 38. Further, the chip 32 is encircled and the peripheral edge of a cap 50 is hermetically sealed to the lower surface of the substrate, thus completing the titled element.

In accordance with 37 C.F.R. §§ 1.97 and 1.98, a copy of each of the listed references or relevant portion thereof is also enclosed. Please note that the enclosed reference JP07-134223 is a computer generated translation, produced by, and obtained from, the Japanese Patent Office Website <http://www.jpo.go.jp/>.

Dated this 11th day of January 2005.

Respectfully submitted,

Peter F. Malen, Jr.

CERTIFICATE OF DEPOSIT UNDER 37 C.F.R. § 1.8

I hereby certify that the following documents are being deposited with the United States Postal Service as First Class Mail, postage prepaid, in an envelope addressed to: Mail Stop: AMENDMENT, Commissioner for Patents, PO Box 1450, Alexandria, Virginia 22313-1450, on the 11 day of January 2005.

- Transmittal for Supplemental Information Disclosure Statement (2 pages) (in duplicate)
- Supplemental Information Disclosure Statement (2 pages)
- Form PTO-1449 listing 2 references (1 page)
- Copies of 2 references
- Credit Card Form PTO-2038 in the amount of \$180 (1 page)
- Postcard

Respectfully submitted,

Linda Clark, Assistant to
